

Chiropractor Job Description

- Deliver information on chiropractic health and wellness
- Perform diagnostic services to determine patients' neuromusculoskeletal condition and advise them about treatment options
- Test patients' joint mobility and muscle strength to identify areas of weakness or tightness, which may indicate a spinal misalignment (subluxation)
- Use a variety of manual adjustment techniques to correct spinal misalignments (subluxations) and improve muscle tone
- Refer patients for additional treatment, such as electrical stimulation or ultrasound therapy, if necessary
- Work with other health care providers in the clinic, hospital or physician office to provide holistic health care services to the patient
- Act as the primary contact between the patient and the chiropractor
- Work with other health care professionals in the clinic, hospital or physician office
- Provide education and training for other health care providers in the clinic, hospital or physician office
- Take patient treatment orders, using the chiropractic management software
- Enforce policies and procedures, and resolve customer service issues
- Participate in ongoing quality assurance activities, and provide feedback to improve the operation of the clinic or office.
