Computer Graphic Designer Job Description

- Planning and preparing work to be accomplished by gathering relevant information and materials.
- Conceptualizing illustrations by designing a rough layout of art and copy based on arrangement, size, type, style, and other related aesthetic concepts.
- Keeping up with new and updated computer graphic and design software, either individually or through formal software training programs.
- Working closely with people in advertising and promotions, public relations, marketing, and so on.
- Making complex ideas more accessible by transforming statistical data into visual graphics and diagrams.
