

# Electrical Estimator Job Description

---

- Identifying and building up cost estimates by analyzing the materials and labor needed to complete several projects
- Examining and explaining the cost of wasted materials and possible delays in a project, and suggesting recommendations or coming up with solutions to fix these issues
- Having and coming up with accurate or exact impressions, identifying and knowing the risks involved in the projects, creating production schedules, and so on
- Efficiently preparing work and guidelines, and creating designs for distribution systems and new clients or customers
- Liaising and communicating effectively with customers, and recommending appropriate locations, wire, transformer sizes, and so on
- Reviewing residential, industrial, and commercial building plans in order to determine the electrical needs of a project
- Reviewing supplier costs in order to determine how much each individual element costs, and negotiating with suppliers in order to bargain the best prices
- Maintaining cost of databases and outlining common costs in order to save time on future estimates.
