IT Risk Manager Job Description

- Assisting in finding practical and cost-effective solutions to identified or revealed security and risk issues
- Building and maintaining strong and positive working relationships and effective means of communication with other risk associates, including the Enterprise Risk Management, Operational Risk Management, and so on
- Providing direction and guidance in the development, implementation, and communication of risk-related policies and standards
- Undertaking risk reviews of the IT control framework
- Completing implementation activities ranging from various technical programs
- Build and maintain an external network with other senior IT risk professionals, as well as applicable risk forums/bodies
- Working in relation and conformity with internal and external auditors
- Evaluating alternative means of reducing the firm's exposure to catastrophic loss
- Providing technical guidance to employees, colleagues, and/or customers
- Providing aggregated risk supervision for various high impact areas of IT services for core components of IT risk measurement and reporting activities
- Actively engaging in end-to-end risk remediation planning, resolution, and monitoring activities.
